

Screen Use Affects Performance

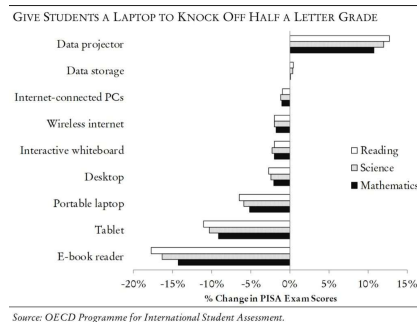

Research shows that screens adversely affect children's cognitive development:

- Hinder memory
- Decrease reading comprehension
- Increase distractibility, preventing 'deep work' (complex thinking)
- Impact social skills and mental health

11

Screen Use Affects Performance

Did you know studies show 'overuse' of technology in the classroom adversely impacts students' test scores and grades in math, science and reading?

Screen Use Affects Performance

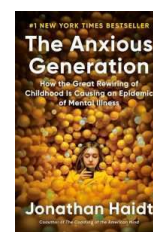

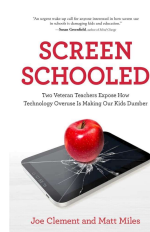

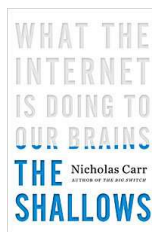

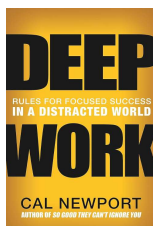

We intend a thoughtful use of technology in the elementary years.

- No student phones or smart devices in the building unless left under school supervision.
- Parent cooperation with minimal screen-time at home
- Paper-based textbooks, readings, and assignments
- Students may learn to use technology for specific applications.
